

HAMED NIROOMAND

Frontend Team Lead | Senior JavaScript / TypeScript Engineer

Yerevan, Armenia (Remote, US/EU hours) · hamed@niroomand.dev · github.com/hamedniroomand · linkedin.com/in/hamedniroomand

PROFESSIONAL SUMMARY

Frontend Team Lead running a Nuxt 4 / Vue 3 team in production, with 7+ years across the JavaScript ecosystem. Led 5 engineers at Jack Westin (2022–2026), a US EdTech platform serving thousands of daily active students: owned architecture and technical strategy, designed REST API contracts with the backend lead, broke PRDs into phased delivery, and ran frontend hiring. Built a shared design-system and core-logic library (Storybook, 95%+ coverage, 4 consumer apps) and a micro-frontend integration for marketing. In parallel, held a part-time architecture and advisory role at Thales MFI (German crypto asset management), delivering a real-time multi-chain, multi-exchange portfolio tracker in Nuxt 4, NestJS, and Bun. Deep in Vue/Nuxt; early adopter of new tooling (Bun, Hono, AI SDK, MCP) and quick to pick up new stacks.

CORE COMPETENCIES

Leadership & Product:	Technical Leadership, Frontend Architecture, Technical Roadmapping, PRD-to-Task Breakdown, API Contract Design, Sprint Planning, Code Review, Hiring & Technical Interviewing, Mentoring, Knowledge Sharing, Technical Documentation
Engineering & Quality:	Vue 3, Nuxt 4, TypeScript, Design Systems, Micro-Frontends, SSR/Hydration, Performance Optimization, REST APIs, Testing Strategy, CI/CD, Design Patterns (Strategy, Factory), Clean Architecture, UX Auditing

WORK EXPERIENCE

Jack Westin — USA (Remote, Full-time) Jan 2022 – Aug 2026
MCAT-prep e-learning platform. Promoted from Senior Frontend Developer to Frontend Team Lead in Sep 2022.

Frontend Team Lead Sep 2022 – Aug 2026

- Led a team of 5 frontend engineers building Vue 3/Nuxt 4 applications used by thousands of daily active students; owned frontend architecture, technical strategy, and delivery planning.
- Owned frontend hiring end to end: defined role requirements, designed technical assignments, and conducted technical interviews for mid-level and lead positions — screened 40+ candidates, made 3 hires.
- Partnered with the backend lead to design RESTful API contracts (resource modeling, auth-resolved routes, versioning) before implementation, reducing integration rework and cross-team blockers.
- Worked with product managers to break PRDs into technical tasks and phased milestones; designed the technical flow and architecture for every major feature.
- Designed and built a shared design-system and core-logic library (Storybook, Vitest, 95%+ test coverage), published as versioned npm packages via GitHub Packages and consumed by 4 consumer applications.
- Delivered reusable components and business logic to the marketing team through a micro-frontend architecture embedded in their WordPress site, removing duplicate implementations across stacks.
- Architected core learning products: interactive testing suites, spaced-repetition flashcards, and a custom video learning player.
- Built an AI chat tutor that streams LLM responses token-by-token into a Nuxt UI (AI SDK) through a Laravel proxy to OpenAI, with authenticated server-side chat history and KaTeX rendering for MCAT formulas.
- Established team engineering standards — code-review checklists, automated testing guidelines, and CI/CD pipelines — that made releases predictable and caught regressions before production.
- Ran regular knowledge-sharing workshops and 1:1 mentoring; authored onboarding and system documentation so new engineers could set up and contribute across all team projects without hand-holding.

Senior Frontend Developer Jan 2022 – Sep 2022

- Built and shipped core Vue/Nuxt features for the student-facing platform; promoted to Team Lead within eight months.
- Introduced component patterns and testing practices later adopted as team standards.

Thales MFI GmbH — Germany (Remote, Part-time, concurrent with Jack Westin) Jan 2024 – Apr 2026

Technical Consultant & Full-Stack Engineer. Crypto asset-management company. Engaged as Technical Advisor, extended to QA lead, then contracted to build products end to end.

- Architected and built a real-time crypto portfolio tracker (Nuxt 4, Bun, TypeScript) that lets asset managers register client wallet addresses and exchange API keys and monitors assets, positions, and orders across 16 blockchains and 12 exchanges.
- Designed a unified integration layer over heterogeneous chain providers and exchange APIs, applying design patterns such as Strategy and Factory to keep every source behind one contract with its own fetching flow — a clean, testable architecture where adding a new chain or exchange is a single-module change.
- Delivered live analytics, charts, and configurable alerts that advisors use to recommend entries and exits to clients.
- Built a project resource-management system (Nuxt 4, NestJS) for planning team members, time allocation, and compensation.
- Built a private MCP server (Hono, Bun) exposing the company's internal data and operations as tools for AI coding agents, enabling the CTO to prototype new product ideas directly against production systems.
- Advised the engineering team on frontend architecture, state management, and critical bug resolution; served as release quality gatekeeper (manual, API-level, and UX validation).

FARO Creaform — Germany (Remote, Part-time, concurrent with Joorchin)

Aug 2021 – Jan 2022

Full-Stack Engineer

- Built Node.js/TypeScript/Express REST services and Vue/Vuetify admin dashboards with full test coverage under enterprise codebase standards.

Joorchin Digital Marketing Agency — Iran (Full-time)

Aug 2021 – Jan 2022

Frontend Developer

- Translated Figma designs into responsive Vue and WordPress front-ends for client web builds.

Xankoo — Iran (Full-time)

May 2019 – Jul 2021

Web Developer. SEO-tooling startup agency.

- Built the customer-facing SEO dashboard in Vue on a Laravel backend: keyword research and suggestions, daily tracking of Google indexing and ranking positions, and a set of on-page and technical SEO utilities.
- Implemented scheduled rank-tracking views, historical trend charts, and alerting so clients could see ranking changes without manual checks.
- Developed and customised WordPress themes and plugins for agency clients, integrating them with the SEO dashboard data.

OPEN SOURCE

Cue — CLI that drives headless coding agents through a GitHub-issue pipeline github.com/hamedniroomand/cue

TypeScript, Bun · MIT · 180+ commits · CI, Codecov coverage, versioned releases, docs site at hamedniroomand.github.io/cue

- Designed a deterministic state machine that uses GitHub labels as state, issue comments for implementation plans, and draft PRs for delivery, with human approval gates before code is written and before merge.
- Multi-engine adapter layer for Claude Code, OpenAI Codex, and Google Antigravity; isolated git worktrees, secret scrubbing in agent subprocesses, real test/lint commands as quality gates, and a local dashboard for transcripts and cost tracking.

TECHNICAL SKILLS

Frontend:	Vue 3, Nuxt 4, TypeScript, JavaScript (ESNext), Pinia, Nuxt UI, Tailwind CSS, UnoCSS, Vuetify, Storybook, Zod, React, Svelte
Backend & Runtimes:	Node.js, NestJS, Express, Hono, Bun, REST API Design, MCP Servers / AI Agent Tooling, Blockchain & Exchange API Integration, Laravel (API integration)
Quality & Testing:	Vitest, Playwright, Cypress, Postman, Manual QA, UX Auditing
DevOps & Tooling:	Docker, GitHub Actions, GitLab CI, GitHub Packages, Vercel, Vite, Git, Figma-to-Code

EDUCATION & LANGUAGES

B.Sc. in Mechanical Engineering — Khayyam University, Mashhad, Iran

2018 – 2022

Languages: Persian (Native) · English (Full Professional Proficiency)
